

RightFind™

Professional

The fastest way to find, share and manage content

RightsDirect's RightFind™ Professional content workflow software helps users find published content, anytime anywhere. Included with your RightsDirect annual copyright license, RightFind gives users the option to purchase individual articles on the spot through our document delivery service. Customers can add additional capabilities, such as API integration, content management and advanced analytics.

Optional Modules

RightFind API

An API (Application Programming Interface) allows applications to communicate with each other. By integrating our rights information with third-party software, you can allow users to share, store and re-use a publication acquired through subscription, pay-per-view or document delivery under the RightsDirect license.

Content Analytics

RightFind's Content Analytics tool provides insight into what published information matters most to your organization by bringing usage statistics from all your publisher agreements into one easy-to-use interface. Upload your subscription costs to analyze spending with cost-per-view reports. RightFind also provides analytics on all your document delivery orders so you can assess your spending.

Digital Library

RightFind searches across your subscriptions, Open Access sources and locally stored documents to deliver full-text articles to employees faster. If the article is not in your organization's holdings, users can buy it on the spot through our document delivery service. Once the article has been purchased, the Digital Library checks RightsDirect license coverage. If covered, RightFind stores a copy for future use by other users. The Digital Library also includes collaboration features such as tagging which allows employees to mark items of interest to their colleagues and work groups.

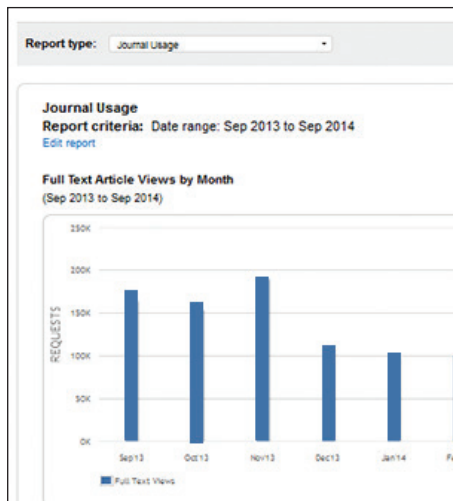

Agreement Manager

Now you can display all the rights you have negotiated directly with publishers in one place. The Agreement Manager module allows you to load all of your rights, in addition to those offered by the RightsDirect annual license directly into RightFind and surfaces the most comprehensive rights to end users. It informs users what they can and cannot do with content via a user-friendly interface, reflecting your organization's rights under all your publisher agreements.
